Recently, a product has arrived on the market that revolutionises the way files are transferred, which is not only a great tool to use when sending files, but also one that will save you time and effort. Appealing and user-friendly GUI The main window of SHAREit lets you choose the function you wish to work with, be it 'Send' or 'Receive', or you can invite friends to use it. Subsequently, the main window of SHAREit lets you select the target device, which can be computer, smartphone, tablet or something else. Choose 'Send' and all you need to do is click on 'Start' and a list of files will be displayed. You will then need to navigate the file of choice by clicking on it or selecting it from the list displayed. The simplest way to send files is to simply select a file from your desktop and the recipient will be notified that it has arrived. If you are sending a large file or a number of files, clicking the 'Receive' icon in the window will bring you to a list of files and you will need to pick one to send. As soon as the selected files are loaded, you can either browse through them individually or in groups; if you choose to group the files, the application will allow you to rename them before loading them on the target device. If you want to send the file to a specific address, you can browse the phone's list of contacts and select the person or device, to which you wish to send the file. A straightforward file transfer tool If you are the person or device being send, your main window will display the files that have been collected and, as soon as you pick one, the transfer will start. The recipient may need to approve the file and then the message will be displayed on the screen. If the recipient agrees, then they will see the files and can load them to be used, or simply delete them to continue with the reception of other files. The best way to send files is to send a folder, for it is far more convenient than a single file. SHAREit's ease of use is an absolute must After analysing several resources, I chose to use this application because it is light and simple to use. While it might not have a comprehensive set of features in comparison with other utilities, I find it to be able to do the job it sets out to

SHAREit Cracked Accounts is a lightweight and very simple to handle software solution whose main purpose resides in helping you transfer files between devices, without resorting to Bluetooth or other similar technologies. Appealing and user-friendly GUI The application features a clean and attractive user interface; the first time you use it, you will be prompted to create an identity for your device, for instance assign it a name and an avatar. Subsequently, the main window of SHAREit lets you choose the function you wish to work with, be it 'Send' or 'Receive', or you can invite friends to use it. Send and receive files between devices with minimal effort When transferring an item through SHAREit, you firstly need to load the source files, browsing through your PC and loading them individually or several at once; it supports countless types of documents, images, songs and videos. Moving on to the 'Next' step requires you to 'Select Receiver'. At that point, the person or device (computer, iPhone or Android) to which you are sending, should click on the 'Receive' button in the main window of SHAREit and the two should successfully detect each other, provided that they are in relative proximity. The found devices are listed so you to pick the one you are targeting; you can thus select it and the recipient will need to confirm they accept the file, that will then be saved to the previously defined location. Depending on the object's size, the transfer will take more or less time, but it will last considerably less when compared with other means of data sharing. A straightforward file transfer tool In conclusion, SHAREit is a useful and practical multi-device utility which aims to assist you in transferring data more quickly than by traditional methods, saving you the time and effort those regularly entail.
